LIGHTING UP TWIN PEAKS
IMPROVED PEDESTRIAN LIGHTING FOR A SAFER NIGHTTIME EXPERIENCE

PROBLEM STATEMENT
Currently, night-time pedestrian lighting around the Twin Peaks viewpoint fail to provide a sense of security for residents, visitors, and businesses in this quiet and hidden area of the San Francisco neighborhood.

PURPOSE STATEMENT
To generate a light installation design which will enhance the Twin Peaks viewpoint in a visually appealing and functional manner for enhanced visibility, protection of pedestrians, and overall safety.

DESIGN SOLUTION
Adhering to the San Francisco Better Streets Plan, lighting standards will be implemented for pedestrian safety and comfort. Criteria for pedestrian lighting, as outlined in this plan, are as follows:

- SUSTAINABILITY
- FIT FOR PURPOSE
- ACCESSIBLE DESIGN
- QUALITY OF LIGHTING

21% of people living in the Twin Peaks area are aged 65 or older. The installation will provide a sense of security for older residents who may feel vulnerable at night.

Additionally, the light installations will contribute to enhancing the overall aesthetic and functional appeal of the Twin Peaks area, making it a more welcoming and inviting space for all residents.
